

Laptop & Device Policy

IT-02 | Version 1.0 | Effective 01 September 2026

Owner: IT & Security | Applies to employees and contractors

Fictional company policy for RAG training and evaluation. All .example addresses are placeholders; these are not live services.

1. Purpose and scope

Maintain secure, reliable company devices. This policy applies to company-issued laptops and company-managed phones. Only company-issued, managed laptops may connect to the VPN. Personal phones may run the authenticator app, but may not store company files or access the VPN.

2. Required protections

IT enrolls each device in endpoint management before handover. Full-disk encryption, endpoint protection and the host firewall must remain enabled. The screen must lock after 5 minutes of inactivity; lock it manually before leaving it unattended. Employees use standard user accounts. Local administrator access requires approval under IT-04 and expires after no more than 8 hours.

3. Updates and software

Install Security-designated critical security updates within 48 hours of the company deployment notice. Install all other security updates within 14 calendar days. Restart when prompted to complete installation. Install software only through the company software catalog or an IT-approved ticket. Do not disable security controls or use unlicensed software.

4. Data and backups

Store work files in approved company cloud storage, which provides daily backups with 30-day retention. Local-only files are not backed up by IT. Do not copy work files to personal cloud storage or unapproved USB devices. An approved removable drive must be encrypted. Report suspected disclosure under IT-05.

Laptop & Device Policy

Procedures and responsibilities

5. Travel and physical care

Keep devices in your possession or in locked storage. Do not leave a laptop in an unattended vehicle or checked baggage. Use a privacy screen when working with confidential information in public. Notify IT through a ticket at least 5 business days before international travel so it can review device and access requirements.

6. Lost or stolen devices

Report loss or theft immediately to Security, and no later than 1 hour after discovery. Give the asset tag if known, last known location, discovery time and whether the device was unlocked. Security coordinates session revocation and remote lock or wipe. Do not attempt to recover a stolen device yourself. Use the emergency reporting channels in IT-05 if normal sign-in is unavailable.

7. Repair, replacement and return

Open an IT ticket for damage or malfunction; do not arrange repairs independently. IT aims to provide a loaner within 1 business day after triage, subject to stock. The standard laptop replacement cycle is 4 years; earlier replacement requires IT approval. Return devices, chargers and security keys within 3 business days of the last working day. IT performs data preservation and secure wiping; do not factory-reset devices yourself.

8. Exceptions and related policies

Security must approve exceptions in writing with an owner and an expiry of no more than 30 days. See IT-03 for remote access, IT-04 for administrator permissions and IT-05 for incident reporting.
